

Rain
MACKINTOSH®

LOW CARBON, STORM RAIN RESISTANCE

POLYPROPYLENE

axroma®

Mackintosh® polypropylene performance fabrics infuse advanced PFAS-free durable water repellent (DWR) directly into the yarn during the solution-dyeing process. This involves blending the DWR additive with polypropylene pellets and UV-resistant colorants, resulting in fibers that offer lasting water resistance and colorfastness.

Mackintosh® Rain is built to perform. It passes stringent rain tests, repels water and resists penetration through its tightly woven structure. Its infused, permanent water repellency remains effective even after dozens of wash cycles.

Sustainability is the core of our fabric. Measured using HIGG MSI scores, low carbon polypropylene is clearly better for the environment than the alternatives.

Polypropylene's impact on the environment is 183% lower than acrylic and 133% lower than polyester.
